

KULDEEP SHARMA

Java Backend Developer | Java | Spring Boot | REST APIs | Spring Security
7082175483 | Kdjassu01@gmail.com | [LinkedIn](#) | [GitHub](#) | Gurgaon

SUMMARY

Java Backend Developer with hands-on experience building RESTful APIs and backend applications using Java, Spring Boot, Spring Security, JPA/Hibernate, and MySQL/PostgreSQL. Skilled in JWT-based authentication, role-based access control, transactional business logic, database-driven applications, API documentation, and automated testing. Delivered backend projects spanning e-commerce order processing, expense management, debt-simplification algorithms, AI-powered categorization, and cab-booking workflows.

TECHNICAL SKILLS

Programming Languages: Java, SQL, JavaScript
Backend Technologies: Spring Boot, Spring MVC, RESTful APIs
Security: Spring Security, JWT, Role-Based Access Control
ORM & Persistence: Spring Data JPA, JPA, Hibernate
Databases: MySQL, MongoDB, H2
Testing: JUnit 5, Mockito, MockMvc
API & Documentation: Swagger, OpenAPI
Build & DevOps: Maven, Docker, Docker Compose, GitHub Actions
Development Tools: Git, GitHub, IntelliJ IDEA, Eclipse
Integration: REST API Integration, Claude API

PROFESSIONAL EXPERIENCE

Software Engineer Intern | Wells Fargo

Dec 2025 – Jan 2026 · Remote

- Analyzed requirements for a financial portfolio management system and identified the core data entities required for development.
- Designed an Entity Relationship Diagram (ERD) covering multiple core entities, attributes, and relationships across the portfolio management system's core modules.
- Documented and published the database design to GitHub using IntelliJ IDEA for team-wide reference.
- Translated business requirements into a structured data model to support application development and long-term maintainability.

Software Engineer Intern | Hewlett Packard – Forage

Jan 2024 – Feb 2024 · Remote

- Proposed a RESTful web service architecture for managing employee records.
- Built a Java Spring Boot web application to handle HTTP requests and process JSON data.
- Created REST endpoints to process employee-related data through a Spring Boot backend.
- Wrote and executed a comprehensive suite of unit tests, improving application reliability and functional coverage.

Software Engineer Intern | TechInterex

Sept 2024 – Nov 2025 · Remote

- Developed Java-based backend applications using Spring Boot, MySQL, and Maven.
- Delivered multiple backend services and RESTful APIs following a structured, layered application architecture.
- Managed persistent data storage in MySQL to support database-driven application functionality.

PROJECTS

Expense Splitter API (LIVE)

[GitHub](#)

Java 17 | Spring Boot 3 | Spring Security | JWT | JPA | PostgreSQL | Docker | GitHub Actions | Claude API

- Engineered a RESTful API for managing group expenses, supporting equal, exact-amount, and percentage-based splitting.
- Implemented a greedy debt-simplification algorithm using max-creditor/max-debtor matching to substantially reduce the number of settlement transactions between users.
- Secured protected REST endpoints using stateless JWT authentication with Spring Security.
- Integrated the Claude API for AI-based expense categorization, with graceful fallback handling for API failures or disabled configurations.

- Configured persistence with Spring Data JPA — H2 for local development, PostgreSQL for production.
- Containerized the application with Docker and set up GitHub Actions for automated build, test, packaging, and Docker build workflows.
- Wrote unit tests using JUnit 5 and Mockito to validate core debt-settlement logic.

E-Commerce Backend REST API

[Github](#)

Java 17 | Spring Boot 3 | Spring Security | JWT | JPA/Hibernate | MySQL | Swagger/OpenAPI | JUnit | Mockito

- Built a REST API for user authentication, product catalog management, and e-commerce order processing.
- Established stateless JWT authentication with access/refresh tokens and role-based authorization for USER and ADMIN operations.
- Added product search, category/price filtering, pagination, CRUD operations, and soft-delete functionality.
- Enforced atomic inventory deduction using @Transactional with rollback handling, eliminating stock-overselling errors.
- Architected a layered structure — Controller, Service, Repository, and DTO — using Spring Data JPA/Hibernate.
- Centralized exception handling and documented APIs using Swagger/OpenAPI with JWT authentication support.
- Validated application behavior with unit and integration tests using Mockito and MockMvc with Spring Security, achieving strong test coverage across core business logic.

Trip Buddy – Cab Booking Backend

[Github](#)

Java | Spring Boot | REST API | JPA/Hibernate | MySQL | Maven

- Developed a Spring Boot REST API supporting CRUD operations for customers, drivers, cabs, and bookings.
- Orchestrated booking workflows and backend logic for managing booking states and driver assignment.
- Structured a layered backend architecture using Controller, Service, and Repository components.
- Enabled database persistence using Spring Data JPA/Hibernate with MySQL.

EDUCATION

Master of Computer Applications (MCA) — GD Goenka University, Gurgaon | 2025 | CGPA: 7.9/10

Bachelor of Computer Applications (BCA) — Seth GLSD Bhiani College, Sri Ganganagar | 2023 | 69%

Additional Training: Full-Stack Web Development – Java, Ducat Institute | Web Development Course, Great Learning
